### PARTS:

## Step 1 — Pentalobe Screws

-  Before you begin, discharge your iPhone battery below 25%. A charged lithium-ion battery can catch fire and/or explode if accidentally punctured.
- Power off your iPhone before beginning disassembly.
-  Opening the iPhone's display will compromise its waterproof seals. Take extra care not to expose your iPhone to liquid damage after completing your repair.
- Remove the two 3.4 mm pentalobe screws at the bottom edge of the iPhone.

To reassemble your device, follow these instructions in reverse order.
